Introduction

Shiba Kenzo (KENZO) is the world's first Shiba meme token, available on a unique, upcoming yield farming site. The Shiba Kenzo token is only Shiba meme token issued on the Binance Smart Chain platform. The company's intent with the meme token is to bring cryptocurrency to the mainstream and give investors an opportunity to be a part of the cryptocurrency ecosystem.

Due to the complexity of the crypto space, the company is creating a series of step-by-step tutorial videos that goes into basic concepts of how to buy the KENZO token. Shiba Kenzo complies with all the necessary KYC/AML procedures protecting both its project and its users from fraudulent activities.

How KENZO Works

KENZO is a native BEP-20 compliant token. This approach ensures speedy transactions and security, as well as compatibility with other third-party services. It can be purchased through PancakeSwap.

Users of KENZO can earn five percent of each transaction, which will be redistributed to holders, automatically adding five percent to the liquidity pool. While this is standard tokenomics, what makes the KENZO token unique is that it is a meme token with an actual use case. Purchasers will be able to stake their KENZO tokens on their own upcoming yield farming site. This means buyers should be able to earn a higher yield than is typically available through regular meme token on the market. The yield farming site is expected to launch in the fourth quarter.

Shiba Kenzo has allocated 10% of its funds for product development, another 5% for marketing and branding and 10% for the company team. The remaining 75% is allocated for sale to the community.

Advantages of Shiba Kenzo KENZO-Token

Owners of the KENZO token gain several advantages. These include higher returns, along with air drops and the opportunity to become part of a next generation cryptocurrency project.

Achieve Higher Returns

As it is currently structured, the KENZO token is expected to deliver a higher rate of return for investors than traditional stock and bond market investment vehicles. Investing in crypto tends to offer the opportunity to earn higher returns than savings accounts. The Shiba Kenzo model follows in this path. This includes the potential to realize long term investment gains, in addition to the typical short-term return on investment (ROI) realized by participants in the crypto market.

Become Part of a Next Generation Project

Shiba Kenzo represents an innovative but mature approach to achieving strong return on investment in the crypto market. In this sense, ShibaKenzo is a next generation project. The key to our success rests in our strategy of spending over 5% on marketing and 10% on product development. Indeed, we have seen other projects collapse due to lack of marketing budget. Failed crypto projects typically lack an interest in developing their product for investors and expanding their roadmaps. A new project like ours needs financial backup, so we look to investors for these finances. We are offering an opportunity to be a part of the Shiba Kenzo's team and community.

Launch of Shibakenzo.finance and Yield Farming

Shiba Kenzo is in the process of launching the website shibakenzo.finance. This website will provide investors with access to ShibaKenzo's distinctive yield farming process. At its core, yield farming allows cryptocurrency holders to secure their holdings, which in turn earns them rewards. More specifically, it is a process that allows investors to earn either fixed or floating interest by investing crypto in a DeFi market.

Technically, yield farming involves lending cryptocurrency through the BSC-network. The process is analogous to what happens when loans are made through banks with fiat money. The borrower pays back the principal with interest. With Yield Farming, the concept is the same: cryptocurrency that would otherwise be on an exchange or in a wallet is lent out via DeFi protocols (or in Ethereum terms, locked into smart contracts) to earn a return.

How does Yield Farming work? The first step in Yield Farming involves adding funds to liquidity pools, which are essentially smart contracts that hold funds. These pools run a marketplace where users can trade, borrow, or lend tokens. Once the investor has added his or her funds to a pool, he or she has officially become a KENZO liquidity provider.

SHIBA KENZO's Yield farming is done with BEP-20 tokens on the Binance Smart Chain (BSC) with rewards being a form of KENZO- token. In exchange for locking their funds into a pool, investors will be rewarded with fees generated by the underlying Defi (KENZO TOKENS).

Fair launch details of the Shibakenzo (KENZO) token

- Ticker: KENZO
- Maximum supply: 500 000 000
- Currencies for making the purchase of KENZO tokens: BNB BEP-20

Token Distribution

Why Invest in Shiba Kenzo?

The ShibaKenzo has a team with vast experience of over a decade of operational and programming knowledge. This experience led to the creation of the world's first shiba meme token that offers distinctive yield farm.

We dare to be different. We are daring in our thinking and challenge the status quo. We value debate and appreciate complementary perspectives as we seek creative solutions to complex problems. Our team works from Berlin, London, Stockholm, and Oslo. We combine a deep understanding of the crypto market.

We are committed to what we do. We are genuinely committed and passionately curious, entrepreneurial in spirit and action—the best idea wins. We get things ready. We intently work to shorten decision paths and prioritize to ensure that everything we set out to do gets done well, rather than too many things at once.

We respect people and all animals. We act with solidarity and seek to build trust in all relationships. We demonstrate responsibility and strive to be on the right side of history, helping to move our industry toward more sustainable, long-term thinking. Therefore, we have decided to donate money to World Wildlife Fund, Inc.
